

## **AMENDMENTS TO THE SPECIFICATION:**

### **Amendment to the Specification:**

Please replace paragraph [0003] of the published application with the following amended paragraph:

[0003] One-chip microcomputers which as a rule are used for controlling devices and in which the Central Processing Unit (CPU) (**Figure 1, 2**), memory (**Figure 1, 8**) and ports are integrated on one chip are referred to as microcontrollers (**Figure 1, 100**). The programming of microcontrollers is executed in machine-dependent assembler language. In the known assembler languages all assembler commands, with the exception of conditional program jumps or program branches, are executed independently of data.
